

# Extreme Water Level Bulletin for Victoria, BC

**Mar 23, 2012**

This bulletin is issued to advise municipal and government stakeholders of marine water level conditions for Victoria, BC. A summary of daily extreme water levels is given below, with daily high values colour coded to convey the damage and flooding risk they represent: **green** indicates normal conditions, **yellow** indicates levels where low-lying coastal areas may experience flooding, and **red** indicates high risk of flooding in exposed coastal areas.

These forecasts are provided by the Institute of Ocean Sciences through a joint program with the BC Ministry of Environment. The forecasts are for research purposes only and should be used **at your own risk**. For further information contact Scott Tinis (250-721-4692) or Richard Thomson (250-363-6555).

## Summary of daily forecast peak water levels:

Date	Water Level (m)	Time of High Water
Mar 23	2.67 m	4:00 AM PDT
Mar 24	2.39 m	4:00 AM PDT
Mar 25	2.45 m	5:00 AM PDT
Mar 26	2.64 m	5:00 AM PDT
Mar 27	2.73 m	5:00 AM PDT
Mar 28	2.78 m	5:00 AM PDT

**Hourly water levels: Black = observed Blue = predicted tide Red = forecast total water level**
