Total Numbers of Salmon Caught - By Area	8		
Total Weight of Salmon Caught - By Area	9		
Salmon Catch by Species in Areas of Highest Catch	10&11		

F O R E W O R D

Although this summary still follows the general format originally used in 1969, the figures are now shown in metric tons (1000 kilograms). The summary will be followed by a detailed Annual Report to be made available on written request.

Preliminary monthly printouts are prepared throughout the year which summarize landings and values by species. This annual summary includes revisions of these data and represents final statistics for 1979.

Prior to 1973 net caught salmon was valued at the cash buying price or minimum prices negotiated by the United Fishermen and Allied Workers Union and the Fisheries Association of British Columbia. Since 1973 actual prices paid on the fishing grounds have been used because competition for salmon has resulted in higher than minimum negotiated prices being paid.

Weights shown may be dressed or round, and are indicated on table headings. Halibut landings include fish delivered by Canadian fishermen to U.S. ports.

Monthly periods do not coincide with calendar months, but are held constant as four or five weekly periods for historical comparison. Four week periods are March, May, June, August, September and November; five weeks are April, July and October.

This report was compiled by the staff of the Statistics Collection and Processing Unit under the direction of Mrs. M. Walker from summaries developed by the Data Processing Unit.

N O T E S

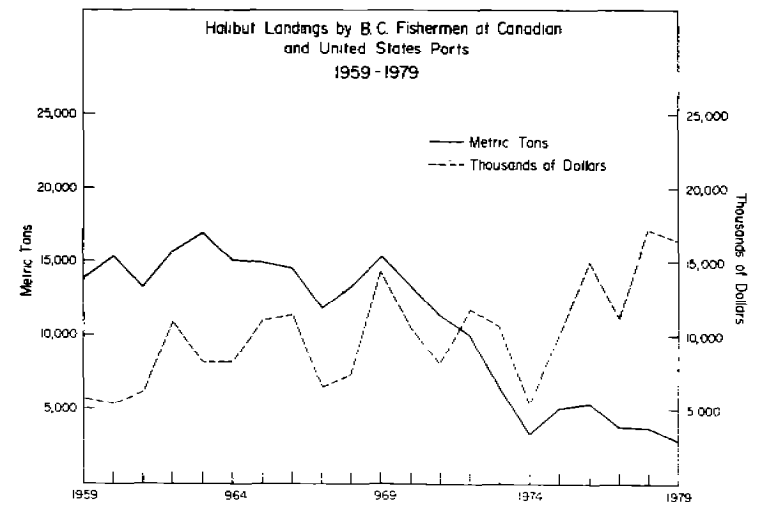

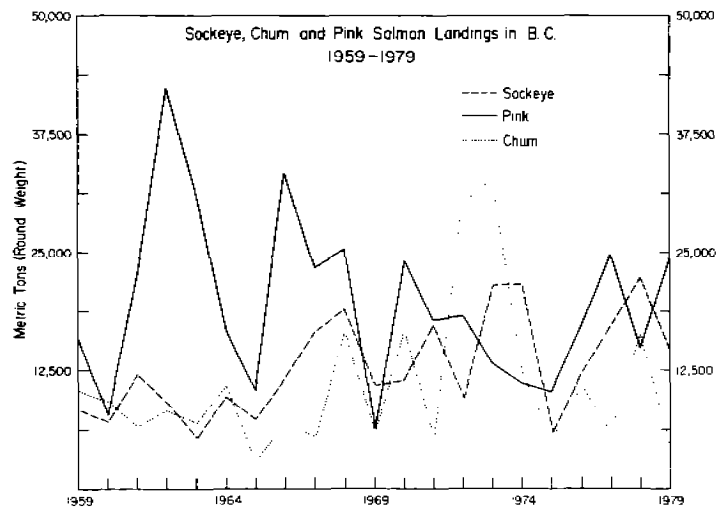

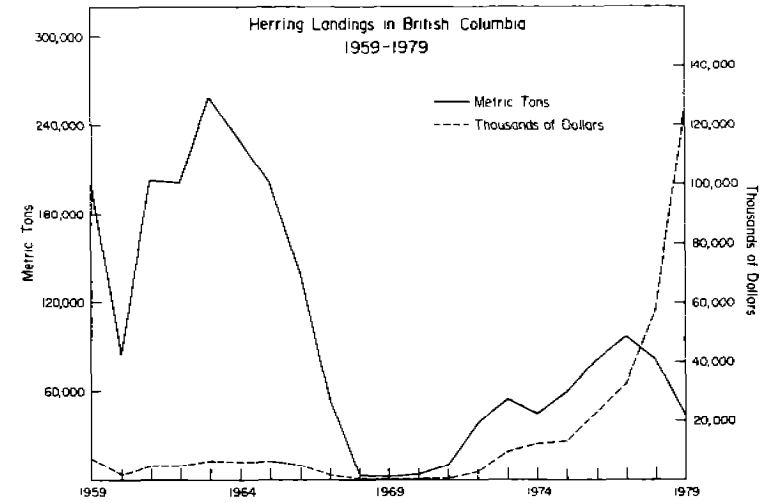

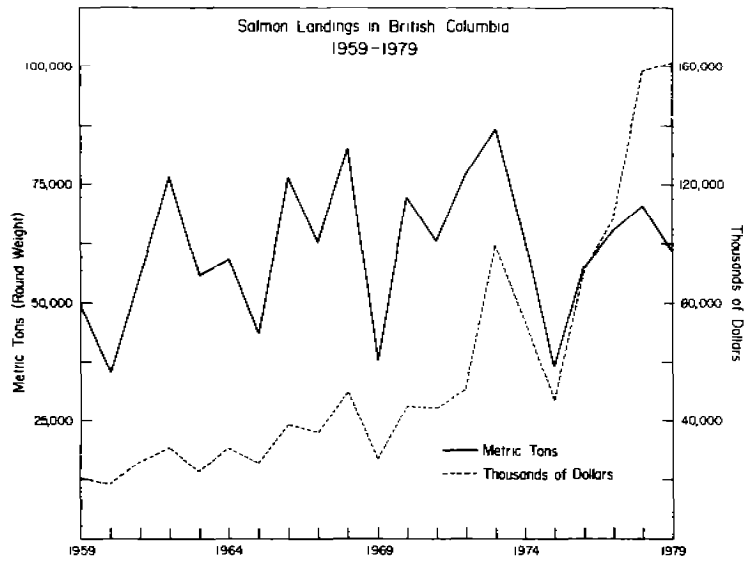

With modern methods of icing and brining used by gillnetters and seiners and the increase in the number of troll freezer boats "gates" in this publication refer to date of delivery, and not necessarily date of catch. The conversion factor for metric tons is:
1 METRIC TON = 2,204.6 POUNDS

(1) See statistical map on page 4

(2) A total of 525 metric tons of halibut valued at \$2,449,000 landed by B.C. fishermen at U.S. ports is included above.

(3) 61 373 U.S. shucked gallons converted to Metric tons.

SUMMARY OF CATCH STATISTICS - BRITISH COLUMBIA - 1979

Although total landings by B.C. fishermen in 1979 showed a decrease of 23% from 1978 a new record value of \$332.5 million was attained.

B.C. Landings and Value - 1970 - 1979

	<u>METRIC TONS</u>	<u>\$ MILLION</u>
1970	108 184	60.3
1971	103 784	58.6
1972	153 090	75.1
1973	176 360	130.4
1974	135 082	101.0
1975	126 645	79.7
1976	174 137	141.9
1977	198 042	167.9
1978	193 269	252.2
1979	148 921	332.5

HALIBUT

The overall decline in 1979 halibut landings is a result of the U.S./Canada decision to phase out Canadian halibut fishing in Alaskan waters and U.S. trawling for groundfish in Canadian waters over a two year period. Although Canadian fishermen caught 817 metric tons of halibut in Alaskan waters only 525 metric tons were delivered to U.S. ports compared with 1 570 metric tons in 1978.

HERRING

Landings of herring decreased from 81 400 metric tons in 1978 to 43 465 metric tons in 1979. Despite this decrease the value increased by more than 100%.

OTHER FISH

Landings of other species increased in both volume and value; a difference of 4 609 metric tons and \$9.3 million respectively.

*Total includes miscellaneous species not specifically shown.

SHELLFISH

Geoduck deliveries increased from 1 016 metric tons in 1978 to 2 463 metric tons in 1979. Shrimp landings were less than half of those reported in 1978.

<u>Year</u>	<u>Crabs</u>	<u>Shrimp</u>	<u>Clams</u>	<u>Geoducks</u>	<u>Abalone</u>	<u>Sea Urchins</u>	<u>Shucked Oysters (Gal.)</u>

(1) Includes horse clams.

SALMON

Despite a decrease in volume of 9 390 metric tons (round weight) 1979 deliveries increased in value in excess of \$2 million over those reported for 1978. Pinks exceeded all other species accounting for 40.3% of all salmon landed. With the exception of coho all other species showed declines.
