FOREWARD

This Annual Summary of British Columbia Catch Statistics follows the general format used since 1969, however tonnes (1,000 kilograms) have been used instead of thousands of pounds since 1978. It is accompanied by a Detailed Annual Report available on written request.

Prior to 1984, salmon landed values published in the Annual Summary did not include bonus payments. Consequently, payments made to fishermen, particularly for net caught salmon were under-reported. Since 1984 salmon landed value has been defined as the initial payment to fishermen including any additional adjustments, bonuses, and delivery payments.

Statistical months do not coincide exactly with calendar months. Months contain either four or five week as follows:

Four weeks -

February, March, May, June, August, September and November.

Five weeks - January, April, July, October and December.

These definitions are constant from year to year.

Under the international agreement, Canadians may land halibut at U.S. ports. Since 1964 these landings have been included in British Columbia Catch Statistics.

This report was compiled by the staff of the Fisheries Data Management Unit under the direction of Maureen Kostner.

IMPORTANT NOTES

1. All catch figures in this publication are reported as follows:
 - a. Salmon - Troll and Handline are reported dressed weight head-on unless otherwise specified.
 - Seine and Gill net are reported round weight.
 - b. Halibut is reported dressed weight head-off.
 - c. All other fish are reported as round weight.
 - d. Round weight is the weight of the whole fish as it comes from the water before any treatment or dressing.
2. Taku and Stikine catches are now excluded from the North Coast summary and are reported separately.
3. "Small" Chinook are net caught fish under five pounds round weight.
4. Rows and columns may not total exactly, due to rounding.
5. In this publication, catch dates are the date of delivery. The date of delivery is not necessarily the date of catch for trollers, gillnetters or seiners using modern fish storage methods.
6. The conversion factor for tonne is: 1 TONNE = 2,204.6 POUNDS.
7. Farm Gate Price is the price received for fish before processing.

- (1) Salmon is reported in standard form, halibut is reported dressed head-off and all other fish are reported in round weight.
- (2) Includes 111 tonnes of halibut valued at \$745,673 landed by B.C. fishermen at U.S. ports.
- (3) Excludes 76,254 tonnes of hake valued at \$12,046,740 delivered to foreign vessels in joint venture fishing arrangements and 6,043 tonnes landed in foreign supplementary fisheries.
- (4) Includes reedi, greenies, rockfish, red snappers and silver perch.
- (5) Includes idiot fish, shark and greenling.
- (6) Includes mussels and deep water littleneck clams.
- (7) Landed value for 1991 oysters reflects a 'Farm Gate' selling price.
- (8) Includes squid, snails, plankton and crayfish.
- (9) Includes anchovies, freshwater fish, hagfish and unspecified species.
- (10) Includes direct deliveries by Canadian fishermen to U.S. ports.
- (11) * Less than 50 kg.
